5. PROJECT DEVELOPMENT PHASE

Title	Auto Ticket Classification using Flow Designer
Team ID	SWTID-2026-2673
Team Lead	VENKATESH M
Team Member	VIGNESH R

The ticket classification and email notification are automated using **ServiceNow Flow Designer**. A Flow named **Auto Classify School IT Tickets** is created under the Global application. The trigger is configured as **Record Created** for the Incident Workflow table, with the condition that the Category field is empty. Different If and Else If conditions identify the type of issue from the Short Description. For Wi-Fi-related issues, the system assigns Category as Network and Subcategory as Wi-Fi. For Projector issues, it assigns Hardware and Projector. For Password or Login issues, it assigns Access and Forgot Password. For Slow or Hanging issues, it assigns Performance and Slow Computer. An email action is also configured to send a ticket confirmation to the caller's email address. After the required conditions and actions are configured, the Flow is activated.
