7.PROJECT DOCUMENTATION

Title	Auto Ticket Classification using Flow Designer
Team ID	SWTID-2026-2673
Team Lead	VENKATESH M
Team Member	VIGNESH R

The project documentation includes the custom table, fields, field types, Category and Subcategory choices, dependent field configuration, Flow Designer conditions, automatic classification rules, email notification, and testing results. The **Project Update Set** created during development is also prepared for final use. After the development and testing activities, the Update Set state is changed from **In Progress** to **Complete**. The completed Update Set is then exported in XML format. The exported XML file contains the project configuration and can be shared or transferred to another ServiceNow environment.
